Introduction to different forms of hot melt adhesive products

Detail Introduction :

Hot melt adhesives as a type of synthetic adhesive are getting more and more attention nowadays, thanks to the vivid vitality that hot melt adhesives have in themselves. Hot melt adhesives have multiple products depending on the form, and their characteristics and usage are not quite the same. Today we will give you a brief introduction.

Hot melt glue pellets are a basic form of hot melt glue and are often used as a raw material for other forms of hot melt glue or can be melted and applied directly. Hot melt glue pellets are generally prepared from hot melt glue and then made through a pelletizing machine. The granulator process is different, and the pellets produced may vary.

Hot melt glue blocks are also one of the forms of hot melt glue products, which are first melted in a furnace and then applied directly to the surface of the bonded material by a machine. Unlike hot melt glue pellets, it is generally not used as a raw material for manufacturing other forms of hot melt glue products. Hot Melt Glue Powder

Hot melt glue powder is also a kind of hot melt glue product. It is mainly used in the clothing lining, the lining fabric, and fabric composite together after the composite lining fabric is not easy to wrinkle, to bring the good clothing effect.

Hot melt glue stick is the most familiar hot melt glue product because it is a kind of finished hot melt glue, is often used as a household adhesive, and is also a powerful tool in the hands of craft enthusiasts. The standard method of using a hot melt glue stick is to use it with the help of a hot melt glue gun. When heated to a certain temperature, the head of the stick melts into a liquid state and is

then pushed out of the gun to be coated.

Hot melt adhesive film is a hot melt product that is getting more and more attention nowadays, and it is also one of the finished products of hot melt adhesive. Hot melt films are available without and with substrates. At present, hot melt adhesive film is mainly used in clothing, shoes, home decoration, automobile, electronics, packaging, and other fields. And, more and more industries are trying to use hot melt adhesive film products to replace traditional adhesives.

Hot melt adhesive net is similar to hot melt adhesive film products, which is another finished form of hot melt adhesive products. It is mainly used in large area fabric lamination but also widely used in decoration, garment, shoe material, and other fields. Hot melt adhesive net and hot melt adhesive film products are similar in function and application, but there are still some differences in specific performance characteristics.

The above are some of the most common hot melt adhesive products. You should have an understanding of. In addition, there are also hot melt glue lines, hot melt glue strips, hot melt glue sheets, and so on, different forms. They each have some special application scenarios, do not know which hot melt glue products you are using.
