

Product Features of the Hot Melt Adhesive Film Roll From China

Detail Introduction :

Product Features of the Hot Melt Adhesive Film Roll From China

Product features of the Hot Melt Adhesive Film Roll from China

Hot Melt Adhesive Film has a high melting point, non-toxic, and is non-shrinking. This type of film can be used to bond to various surfaces, and its high melting point allows it to perform at an exceptional level. These products are available in double dot, paste dot, and powder dot varieties. They can be used to bond a wide range of materials.

This hot melt adhesive film is available in 500' rolls and is 100 percent glue. It is 100% adhesive and has a backing paper. There is no need to remove the liner before applying it. Once activated by heat, the film bonds instantly. There is no need to wait for it to dry or cure. Once laminated, the material can be cut immediately. It is a versatile, high-performance adhesive.

The TPU hot melt adhesive film is available in two types. The low-temperature type has no elasticity stretch and is white matte. The medium-temperature version has elasticity stretch and is transparent. The high-temperature type is transparent and has excellent adhesion properties. It can be used for various applications, including packaging. Its durability is exceptional, making it a desirable choice for manufacturing of packaging, window coverings, and more.

The TPU hot melt adhesive film is available in rolls with or without backing paper. The former requires backing paper and is entirely adhesive. The latter requires no backing paper and must be ironed between layers of materials. Both films must be laminated to ensure proper bonding and adhesion. After the lamination process is complete, the laminated material can be cut immediately.

The TPU hot melt adhesive film is available in 500' rolls and is 100% glue. There is no need to remove the liner before using the product. Once activated by heat, the adhesive fabric bonds instantly with its surface. It is suitable for various uses. It has a low melting point and is environmentally friendly. It has passed the RoHS 2.0. Its high melting point allows for easy lamination of leather and other flexible materials.

This high-quality hot melt adhesive film is available in rolls of 500'. It has no backer paper and is 100% adhesive. Its high-strength strength means that it can be used for all applications. Unlike other types of adhesive film, this hot melt film is highly flexible, making it a perfect choice for the textile and packaging industries.

Among the various types of Hot Melt Adhesive Film Rolls, HMT Manufacturing offers a 500'-inch roll of adhesive. It has no liner paper and is 100% glue. There is no need to peel off the liner before using the

melt adhesive fabric. Its bonding strength is instantaneous, having a very low-curing time. It can be e
Another type of Hot Melt Adhesive Film Rolls comes in different sizes. The cheapest one is available in
rolls and has no backer paper. HMT Manufacturing's hot melt adhesive film roll is thinner and more f
compared to other hot melt adhesive film types. In addition to its high quality, it also has a fast cure t
