Detail Introduction :

What Are the Classification Products of Hot Melt Adhesive Film Products

## What Are the Classification Products of Hot Melt Adhesive Film Products

Release paper substrate hot melt adhesive film

The hot-melt adhesive film of the release paper substrate is produced by a coating method, and the hot-melt adhesive raw material is coated on the release paper. Since a layer of release paper is attached to the back of the hot melt adhesive film with release paper, the release paper needs to be torn off when used.

Hot melt adhesive film for blue PE film substrate

The difference between the blue PE film base hot melt adhesive film and the ordinary release paper hot melt adhesive film is that it uses blue PE film to replace the release paper, and the hot melt adhesive is directly attached to the PE film superior.

Substrates hot melt adhesive film

The substrate-free hot-melt adhesive film refers to a hot-melt adhesive film product that does not have release paper or a release film attached to the back of the hot-melt adhesive film and can be used directly. Substrates hot melt adhesive film is usually produced by casting method, which can effectively reduce the cost of hot melt adhesive film products so that hot melt adhesive film can be promoted in the field of area compounding.

Hot melt adhesive mesh

Hot-melt adhesive mesh film refers to a hot-melt adhesive product made by spinning hot-melt adhesive materials after melting. It is generally believed that hot-melt adhesive mesh film has better air permeability than hot-melt adhesive film.

Black hot melt adhesive mesh

Black hot melt adhesive mesh, as the name suggests, is to make the hot melt adhesive mesh black. Usually during production, a black colour masterbatch is added to the raw material. Black hot melt adhesive is usually used in some applications that require shading.

Hot Melt Adhesive Tape

Hot-melt adhesive film tape is a wide-width hot-melt adhesive film roll that has been produced and cut into narrow-width hot-melt adhesive film tapes, which are generally used for material bonding and compounding in the field of clothing.

Hot melt adhesive mesh tape

Hot-melt adhesive mesh tape is a tape product that divides the produced wide-width hot-melt adhesive film into narrow-width tape products and is generally used for composite bonding of materials in the clothing.
