What is the Difference Between Hot Melt Adhesive Fi and Ordinary Hot Melt Adhesive

Detail Introduction :

What is the Difference Between Hot Melt Adhesive Film and Ordinary Hot Melt Adhesive

What is the Difference Between Hot Melt Adhesive Film and Ordinary H Melt Adhesive

The hot-melt adhesive film is a hot-melt sticky product that has been widely used in recent years. It is wide clothing, shoemaking, luggage manufacturing, architectural decoration, electronic industry and other fields addition to hot-melt adhesive films, there are actually many kinds of hot melt adhesive products, such as h adhesive sticks, which are more well-known, as well as hot-melt adhesive pellets, hot-melt adhesive powd on. So is the raw material used in hot melt adhesive film different from these other hot melt adhesive produ

In fact, no matter what form of hot melt adhesive products, from the perspective of raw materials, they are essentially the same, and they are all hot melt adhesives. Their main components are nothing more than E and PA. These materials can be made into a colloidal form, a rod form, and of course, a film form.

However, hot melt adhesive raw materials for making hot melt adhesive films need to consider some spec properties, such as the film-forming properties of hot melt adhesives. Some hot melt adhesive raw materia difficult to harden quickly after melting, and the film-forming performance is relatively poor, so it is difficult t into a film form. This requires some improvements in the composition of hot melt adhesive raw materials. V making the hot melt adhesive film, it is also necessary to add corresponding additives as needed to help th melt adhesive film achieve some special performance requirements, such as antioxidants, slip agents, etc

In short, hot melt adhesive films are essentially no different from other types of hot melt adhesive films. Th said to be different forms of the same type of material. However, in actual manufacturing, it is necessary to screening and adjustment of the raw materials of the hot melt adhesive, and the purpose of producing qua melt adhesive film products has been achieved.emphasized text
